Step 1 upper-left candidates: 30 enzymes

Weighted angle >150° and harmonic distance <4 Å · one row per enzyme · sorted by angle

- Gamma-glutamylpolyamine synthetase GlnA3 (n=25)
- Alanine--anticapsin ligase (n=3)
- Staphyloferrin B biosynthesis protein SbnC (n=1)
- L-amino acid ligase (n=1)

50 poses per candidate. Angle = Σ(θ/d) / Σ(1/d); harmonic distance = n / Σ(1/d).
These are step 1 ensemble summaries; step 2 results are retained in the accompanying table.
